                                                                                                                                                                                                                                                         The present invention relates to novel human monoclonal antibodies. The antibodies can bind to human Tumour Growth Factor-beta (TGF-beta) II receptor, resulting in the inhibition of the signal transduction of human TGF-beta into cells. The antibodies can be used for the prevention and treatment of diseases associated with the production of TGF-beta, such as tissue fibrosis in the lung, liver, skin, kidney or other tissues, and atherosclerosis, atopy, keloid and arthritis. The present sequence was used in the present invention.

                                                                                                      ò
                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                     The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as colerant protein expression or activity. The polypeptides can be used as colerant protein expression or activity. The polypeptides can be used as colerant protein expression or activity. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense blA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Craise antibodies/elicit an immune response, to determine plantitative disorders, treatens markers, regenerating bone, cartiage, tendon, cligament and/or nerve tissue, wound healing, treating plants, promoting contraceptive, reating osteoporosis and osteoarthritis, anaemia, contraceptive, reating osteoporosis and osteoarthritis, anaemia, allorant in infection or from autolimunity, cancer, alloray, asthma, cungal infection or from autolimunity, cancer, alloray, asthma, crample of the present sequence represents a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GTGCAGCTGGTGCAGTCTGGAGCAGAGGTGAAAAAGCCCCGGGGAGTCTCTGAAGATCTCC 120

The present invention describes a method (MI) for producing a human antibody phage display library (I), comprising: (I) providing a nonhuman transpenic animal (II) whose genome comprises human immunoglobulin genes; (2) isolating nucleic acide encoding human antibody chains (III) from lymphatic cells; and (3) forming a library of display packages whose members comprise a nucleic acide encoding (III) which is displayed from the package. The method is used for producing a human antibody display library, e.g., a Fab phage display library. The display method may be used to screen nucleic acids encoding antibody chains obtained from immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies (immunise thumans with antigens, and the difficulties faced with immortalising B cells are avoided. AAH29958 to AAH30966 and AAB74094 to AAB75056 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       237

                                                                                                                                                                                    The present invention describes a method (MI) for producing a human cantibody phage display library (I), comprising: (I) providing a nonhuman transgent animal (II) whose genome comprises human immunoglobulin genes; (2) isolating nucleic acide encoding human antibody chains (III) from members comprise a nucleic acid encoding library of display packages whose members comprise a nucleic acide encoding (III) which is displayed from the package. The method is used for producing a human antibody display used to screen nucleic acide encoding antibody chains obtained from immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies antibodies with antigens, and the difficulties faced with immortalising B cells are avoided. AAH29958 to AAH30066 and AAB7994 to AAB75056.

The present invention describes a method (MI) for producing a human antibody phage display library (I), comprising: (I) providing a nonhuman transgenic animal (II) whose genome comprises human immunoglobulin genes; (2) isolating nucleic acids encoding human antibody chains (III) from libraty cells, and (3) forming a library of display packages whose muchers comprise a nucleic acids encoding (III) which is displayed from the package. The method is used for producing a human antibody display library, e.g., a Fab phage display library. The display method may be used to streen nucleic acids encoding antibody chains obtained from immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies antibodies with antispens, and the difficulties faced with immortalising B cells are avoided. AAH29958 to AAH30066 and AAB74994 to AAB75056.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Producing a human antibody phage display library comprises providing a transgenic animal whose genome comprises human immunoglobulin genes and isolating nucleic acids encoding antibody chains from lymphatic cells -

                The invention provides an antibody (Ab) comprising donor CDRs (complementarity determining regions) derived from a non-human antigenspecific donor antibody, and an acceptor framework from a non-human primate. The Abs are prepared by grafting CDRs from a non-human antigenspecific donor antibody onto homologous Old World ape or monkey acceptor frameworks. The Abs have reduced immunogenicity and are better tolerated in humans (because of the close similarity between the human and primate proteins), but retain the full antigen-binding affinity of the donor

Protein sequences (AAR66295-51) are novel human immunoglobulin heavy (halain sequences encoded by novel isolated genes. The genes constructs: V202; V103; V21; V6; V24; 3-31; M84; M118 and M111, by PCR emplification using primers AA078917-38. The genes are subdivided into 5 fragments were isolated from the genes are subdivided into 5 fragments were isolated from high molecular weight DNA from human placenta. The DNA was partially digested with TagI restriction enzyme. The fragments were located from high molecular weight DNA from human The fragments were separated by gel electrophoresis and 3-45 kb fractions were collected. The fragments were ligated with ClaI-digested cosmid were collected. The fragments were ligated with ClaI-digested cosmid into B.coli 490A. The fragments were then subcloned by colony hybridisation. The VN genes and the DNA fragments encoding them are useful in producing human immunoglobulin in mammalian hosts.

The specification describes a transgenic non-human mammal which has genome modifications that comprise an inactivated endogenous immunoglobulin [19] locus, so that the mammal does not display normal B-cell development. The modifications has an inserted human heavy chain Ig locus in germline configuration, the human heavy othain Ig locus in misor micro constant region and regulatory and switch sequences, human J-H genes, and human V-H genes and an inserted human kappa light chain Ig locus comprising a human V-H genes and an inserted human kappa constant region, J-kappa genes, chain Ig locus in germline configuration, the human kappa light chain Ig locus comprising a human kappa constant region, J-kappa genes, and V-kappa genes, where the number of V-H and V-kappa genes, increased to restore normal B-cell development in the mammal. The transgenic animals have a near complete human Ig locus, including both a human heavy chain locus and a human antibodies when exposed to particular antigens e.g. when exposed to human IL-8, EGRR or TNF- alpha
                          Human; immunoglobulin; Ig; transgenic; non-human mammal; inactivated endogenous Ig locus; B-cell development; U-H; D-H; V-H gene; kamman heavy chain Ig locus; micro constant region; J-H; D-H; V-H gene; kappa light chain Ig locus; kappa constant region; J-kappa gene; V-kappa; production; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     106 TCTCTGAAGATCTCCTGTAAGGGTTCTGGATACAGCTTTACCGGCTACTGGATCGGCTGG 165

The present sequence is the anti-murine CTLA-4 sFv (M24 sFv). This is a membrane-associated protein which binds to CTLA-4. Chimeric constructs comprising DNA sequences encoding the extracellular domain of murine CTLA4 and human CDB were used for the study of anti-CTLA4-sFv protein. The anti-hCTLA4 sFv functions as a ligand binding to CTLA-4 on activated 1-colls and anteagonises the co-stimulatory signal provided by the interaction between donor B7 and recipient CD28. Cells expressing the anti-hCTLA4 sFv failed to stimulate T-cell proliferation. This is used in
                                                                                                                                  405
                                                                                                                                                                      80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Anti-murine CTLA-4 sFv; M24 sFv; single chain antibody; murine CTLA4; membrane-associated protein; chimeric construct; extracellular domain; human CD8; ilgand; activated T-cell; co-stimulatory signal; donor B7; recipient CD28; T-cell proliferation. xenograft-specific immunosuppression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB67617-23 represent single chain antibody (scFV) fragments which der specific for human leukocyte antigen (HLA)-Cw6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleotides. The specification describes a human immunoglobulin fragments specific for HLA-Cw6. The HLA-Cw6 serotype is considered highly relevant in studies of natural killer call silencing as well as miscarriages. HLA-Cw6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated human immunoglobulin or functional immunoglobulin
fragment specific for human leukocyte antigen CW6, useful for treatment
of humans and for human leukocyte antigen phenotyping .

                    are specific for human leukocyte antigen (HLA)-Cw6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleotides. The specification describes a human immunoglobulin fragments specific for HLA-Cw6. The HLA-Cw6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. HLA-Cw6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobulin fragments are useful for the preparation of a pharmaceutical for the treatment of humans. They are also useful for HLA phenotyping.

                                                                                                                                                                                                                                            firgment. The fragment is used to produce a mixture or panel of a different specific binding members, each comprising an antibody VH cand/or VL variable domain and capable, when displayed on the surface and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the DS VH and/or VL variable domain when bood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to bind endothelial cells or other brain cell antigen, ability to bind endothelial cells or other brain cell antigen, ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and receptor. The national disease, AIDS-related dementia, epilepsy and transferrin disease, such as Alzheimer's disease, prion diseases involving inflammation cocurring within the brain or central nervous system.

AAB67617-23 represent single chain antibody (scFv) fragments which are specific for human leukocyte antigen (HLA)-Cw6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleocides. The specification describes a human immunoglobulin fragments specific for HLA-Cw6. The HLA-Cw6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. HIA-Cw6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobulin fragments are useful for the preparation of a pharmaceutical for the treatment of humans. They are also useful for HLA phenotyping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        58 GAGGTGCAGCTGGTGCAGTCTGGAGGTGAAAAAGCCCGGGGAGTCTCTGAAGATC 117

US-09-825-012-66

i Sequence 66, Application US/09825012

Patent No. US20020122798A1

GENERAL INFORMATION:

APPLICANT: Young, Robert

TITLE OF INVENTION: Compounds for Targeting
FILE REFERENCE: 43191-256808

CURRENT PAPPLICATION NUMBER: US/09/825,012

FRICH APPLICATION NUMBER: US 60/237,159

PRIOR PILING DATE: 2001-04-03

PRIOR APPLICATION NUMBER: US 60/237,159

PRIOR APPLICATION NUMBER: GB 0008049.9

PRIOR FILING DATE: 2000-04-03

NUMBER OF SEQ ID NOS: 102

SOFTWARE: PatentIn version 3.1
